Letter of recommendation for Mr. Thomas Petazzoni

Dear Sir or Madam,

Mr. Petazzoni was an intern within our Company for 24 weeks, from February to July 2003. Our Company designs and markets an operating system for consumer electronics devices. Mr. Petazzoni was mainly tasked with designing and implementing a set of software modules that enable access to mass storage peripherals such as Flash memory and hard disk drives. An independent and hard-working individual, Thomas designed the architecture and carried out the implementation. His work is currently used in production.

During his entire working period within our company, Thomas displayed sound knowledge of operating systems design and internals, a solid work methodology, and a clear ability to fit in a team of senior developers. I had the opportunity to personally assess the quality of his work and as a result, I trusted him with a larger mission than originally defined at the beginning of his internship.

I regret that I have been unable to hire Thomas, as he had to carry on with his degree. I enthusiastically recommend him for an internship as well as a position as a developer, in particular in the field of operating systems.

Yours sincerely,

Emmanuel Marty  
Chief Technical Officer and founder
